Agenda Introduction to Indoor GIS **Interactive Demonstrations** 5 Getting Started with Indoor GIS **Questions & Answers**

Indoor GIS users can find building data in 3 clicks.

Non-expert users can quickly filter indoor maps by sites, buildings, floors, and layers throughout the vertical asset portfolio.

Web and mobile apps streamline access and sharing to users anywhere on any device.

Indoor wayfinding and space reservations enable hybrid workplace experiences.

Employees can explore, search, navigate, request, and reserve accommodations to make their visits to the workplace painless.

Indoor map data can be stored and accessed locally and in the web for optimal performance at scale.

Indoor positioning systems give end users real-time situational awareness.

Maps open instantly to an end user's location, routes generate from anywhere, and users can securely share their real-time location with coworkers.

Location sharing drives space use insights and rapidly informs public safety or physical security.

USER STORY Combining Spatially Contextualized Assets and Real-World Building Spaces Enables a Vertical Asset Management Program

"

ArcGIS Indoors provides a solution that allows us to standardize how we manage the assets throughout our organization and provides real-time insights into the status of our operational and maintenance activities within our facilities.

Andrew Hayes Technology Supervisor, Raleigh Water

P

Michigan State University

ArcGIS Indoors

Indoor Mapping for Smart Buildings

- Enable indoor maps in ArcGIS Online or Enterprise
- Convert and curate indoor maps for smart building apps
- Support interactive navigation and reservation experiences

ArcGIS IPS

Indoor Positioning for Smart Buildings

- Easily set up indoor positioning systems
- Enhance indoor apps with indoor location services
- Streamline communication and collaboration

Indoor Mapping

Enable staff to convert and curate an indoor map to enable web-based access and sharing of indoor maps through Indoor Viewer, Mobile, and Dashboard apps.

Hybrid Space Planning

Enable staff to create and curate and indoor map for Indoors Space Planner app to enable space moves and reservations in Indoors Viewer and Mobile Apps.

Indoor Positioning

Enable staff to plan, and setup indoor positioning systems for indoor location services in Indoors Mobile and other apps developed with ArcGIS Runtime.
