

Getting Started with Imagery

Yuri Potawsky
Senior Solution Engineer @ Esri Charlotte

Esri Southeast User Conference

Why Utilize Raster Data in ArcGIS?

- 1. Imagery is central to effective GIS Use**

Raster data oftentimes forms the foundational information from which other data is created.
- 2. Rich spatial analysis framework**

Use the ArcGIS Geoprocessing environment and custom tools to extract information.
- 3. Makes use of free and publicly available data**

Use big data to support decision making.

Why Imagery and Remotely Sensed Data Are Crucial To a GIS

Features of the ArcGIS Platform

70+ **WORK WITH NATIVE RASTER DATA**
ArcGIS Pro supports 70+ native raster types.

 **SUPPORTED EXPORT FORMATS**
Write data to 10 different raster types.

 **TIME ENABLED**
Support a variety of time variables for imagery.

 **MANAGE MASSIVE COLLECTIONS OF IMAGERY**
The Mosaic Dataset supports petabytes of data.

 **CREATE DYNAMIC IMAGERY PRODUCTS**
Create rasters on-the-fly with Functions.

 **COMPLETE IMAGE MANAGEMENT SYSTEM**
Frame Camera, Multispectral, and Drone Imagery.

**I have Imagery...
So what do I do with it?**

Clientside Rendering

Landcover with Image Tile Layer

Dynamic Raster Layer

Managing and Visualizing Oriented Imagery

Find resources showing how to manage and visualize non-nadir imagery, including street-side, panoramic, and inspection images.

Managing Lidar Data

Find resources describing how to manage and share lidar point clouds and derived raster products.

Serving Cached Imagery

Find resources describing how to serve imagery as cached image tiles hosted on ArcGIS Online or your ArcGIS Enterprise portal.

Managing Frame Camera Imagery

Find resources for managing raw imagery from frame sensors and applying a photogrammetric model within ArcGIS.

ArcGIS Supports Multiple Workflow Process

Authoritative resources to help you manage, analyze, and use your imagery and rasters.

Managing Drone Imagery

For users with large drone imagery collections, find resources for implementing scalable data management solutions for use with Drone2Map or ArcGIS Pro ortho mapping.

Using Mosaic Datasets to Manage Imagery

Find resources describing how to use mosaic datasets to manage all kinds of imagery and rasters.

Managing High-Resolution Satellite Imagery

Find resources explaining how to create mosaic datasets to manage and visualize imagery from high resolution (< 5m) satellites.

Managing Scanned Maps

Find resources explaining how to create mosaic datasets to manage and display collections of scanned maps.

Imagery Use Patterns

How Can Imagery Be Used Within The Platform...

Management

Catalog and publish imagery efficiently and securely.

Image Mapping

Create authoritative, imagery-derived maps and products.

Analysis

Use advanced analytical tools to extract location-based information from imagery.

Visualization and Exploitation

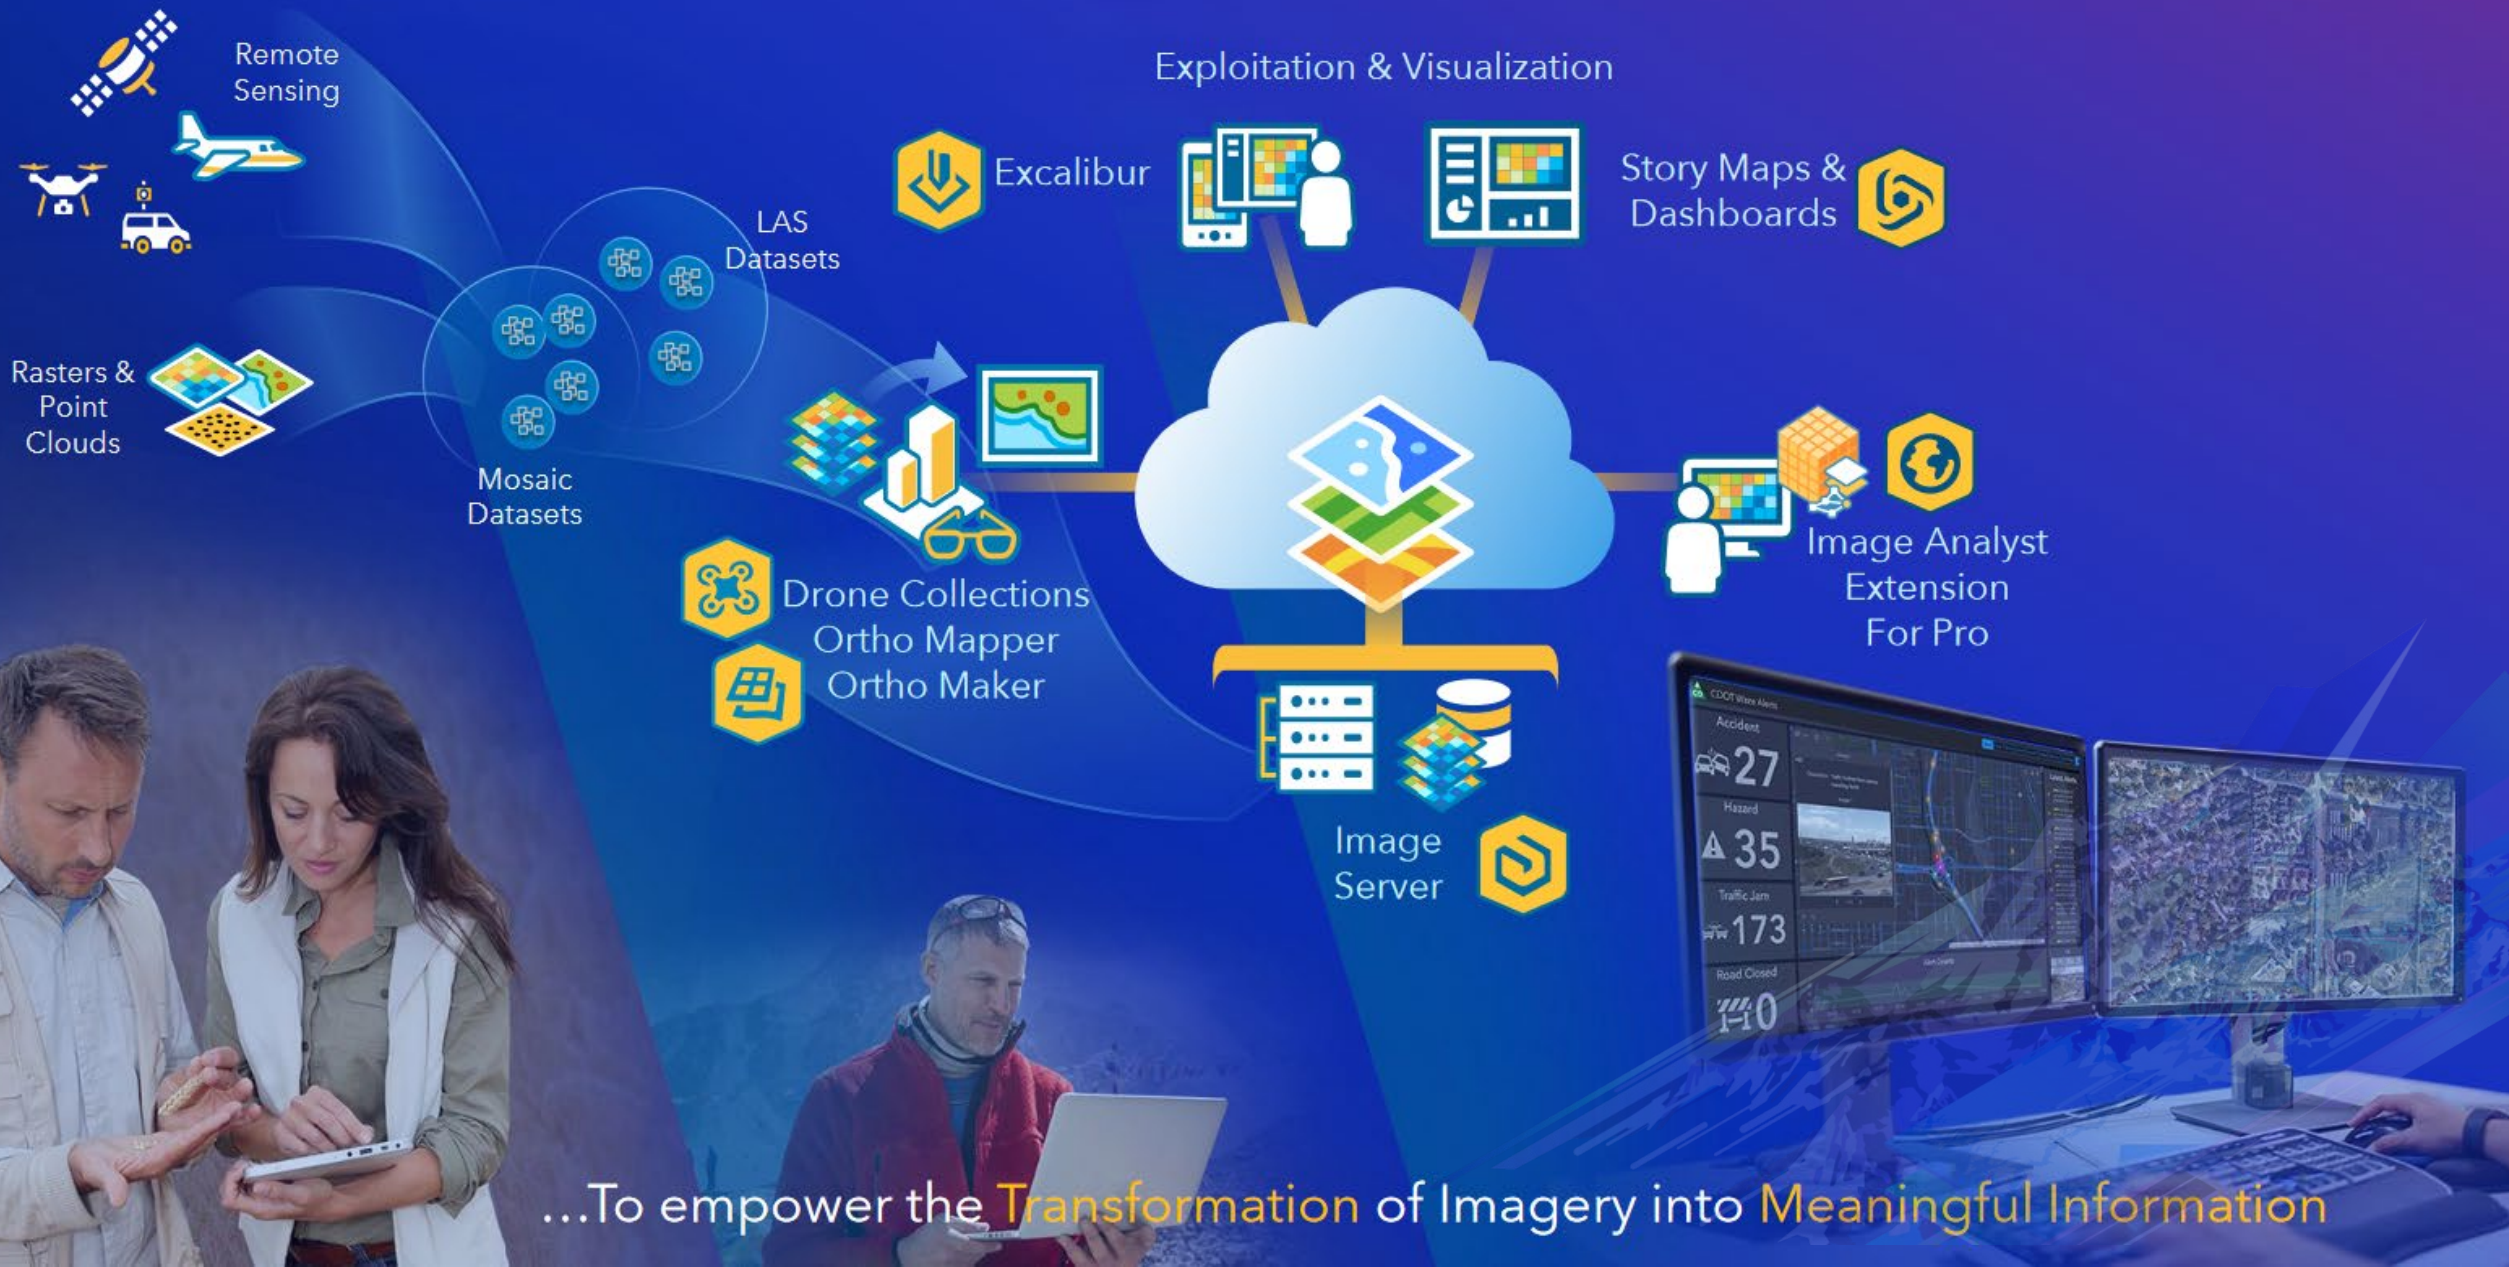

Leverage human interpretation to extract information from imagery.

Content

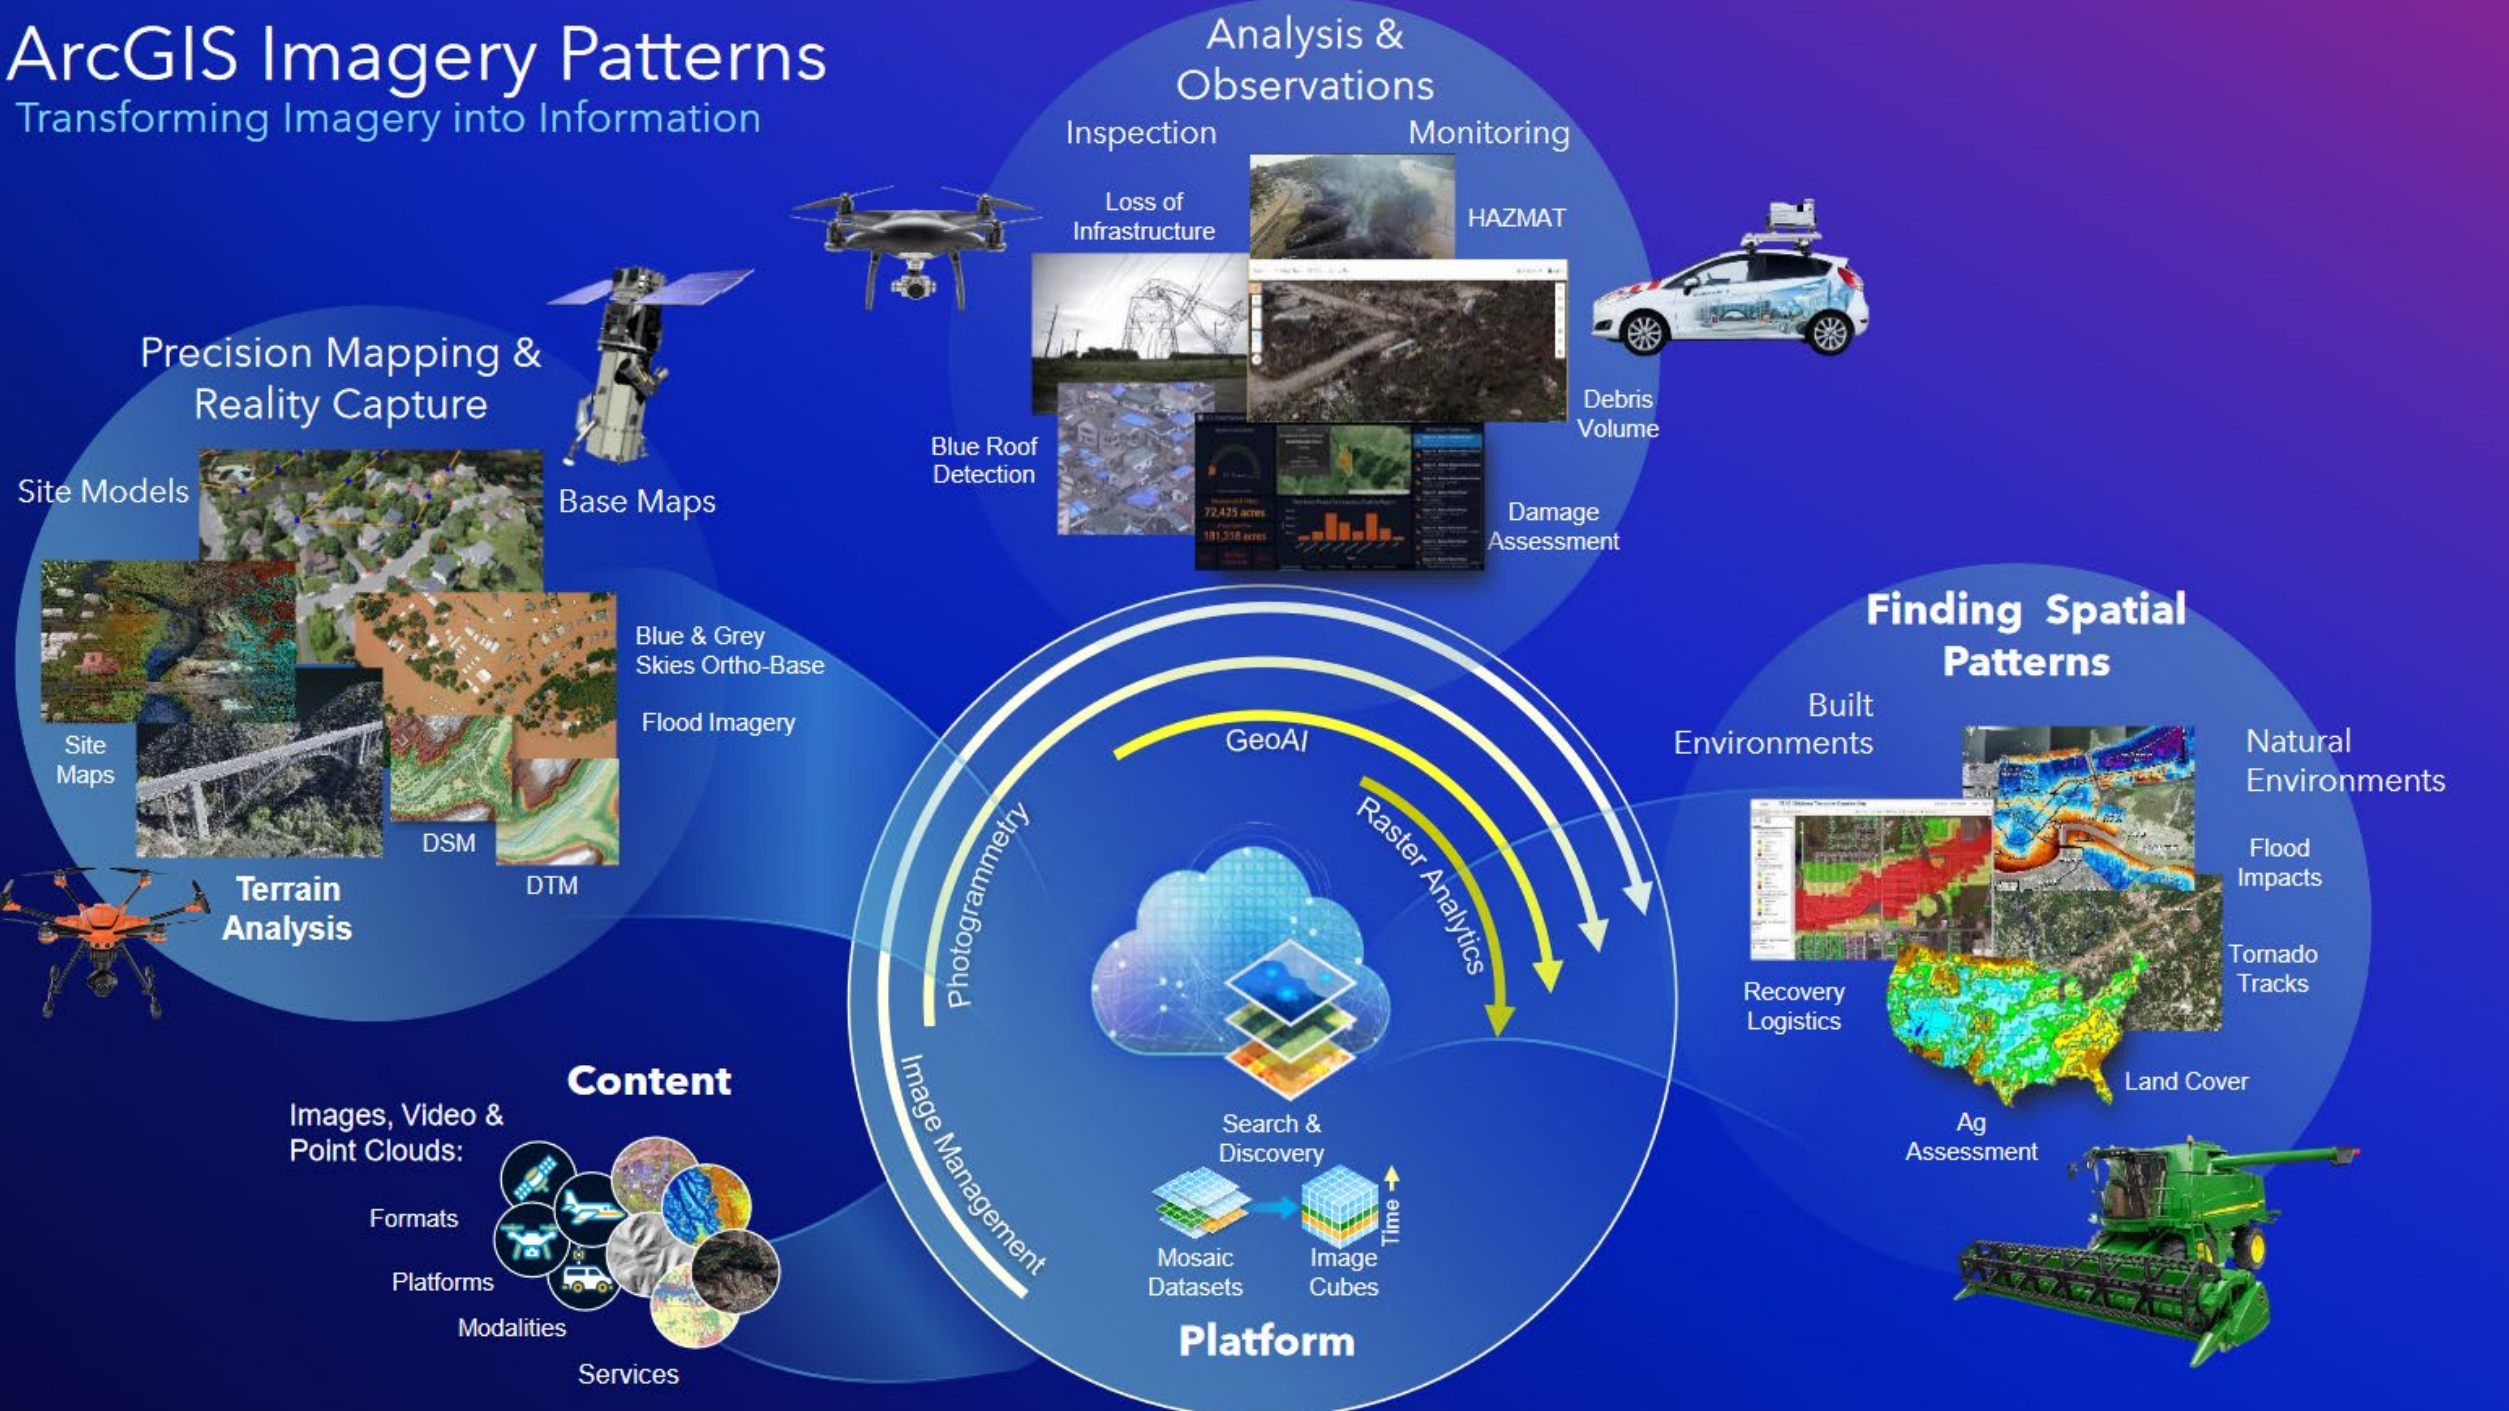

Add insight and context with Esri's collection of online imagery, terrain, and GIS layers.

Imagery as Part of ArcGIS

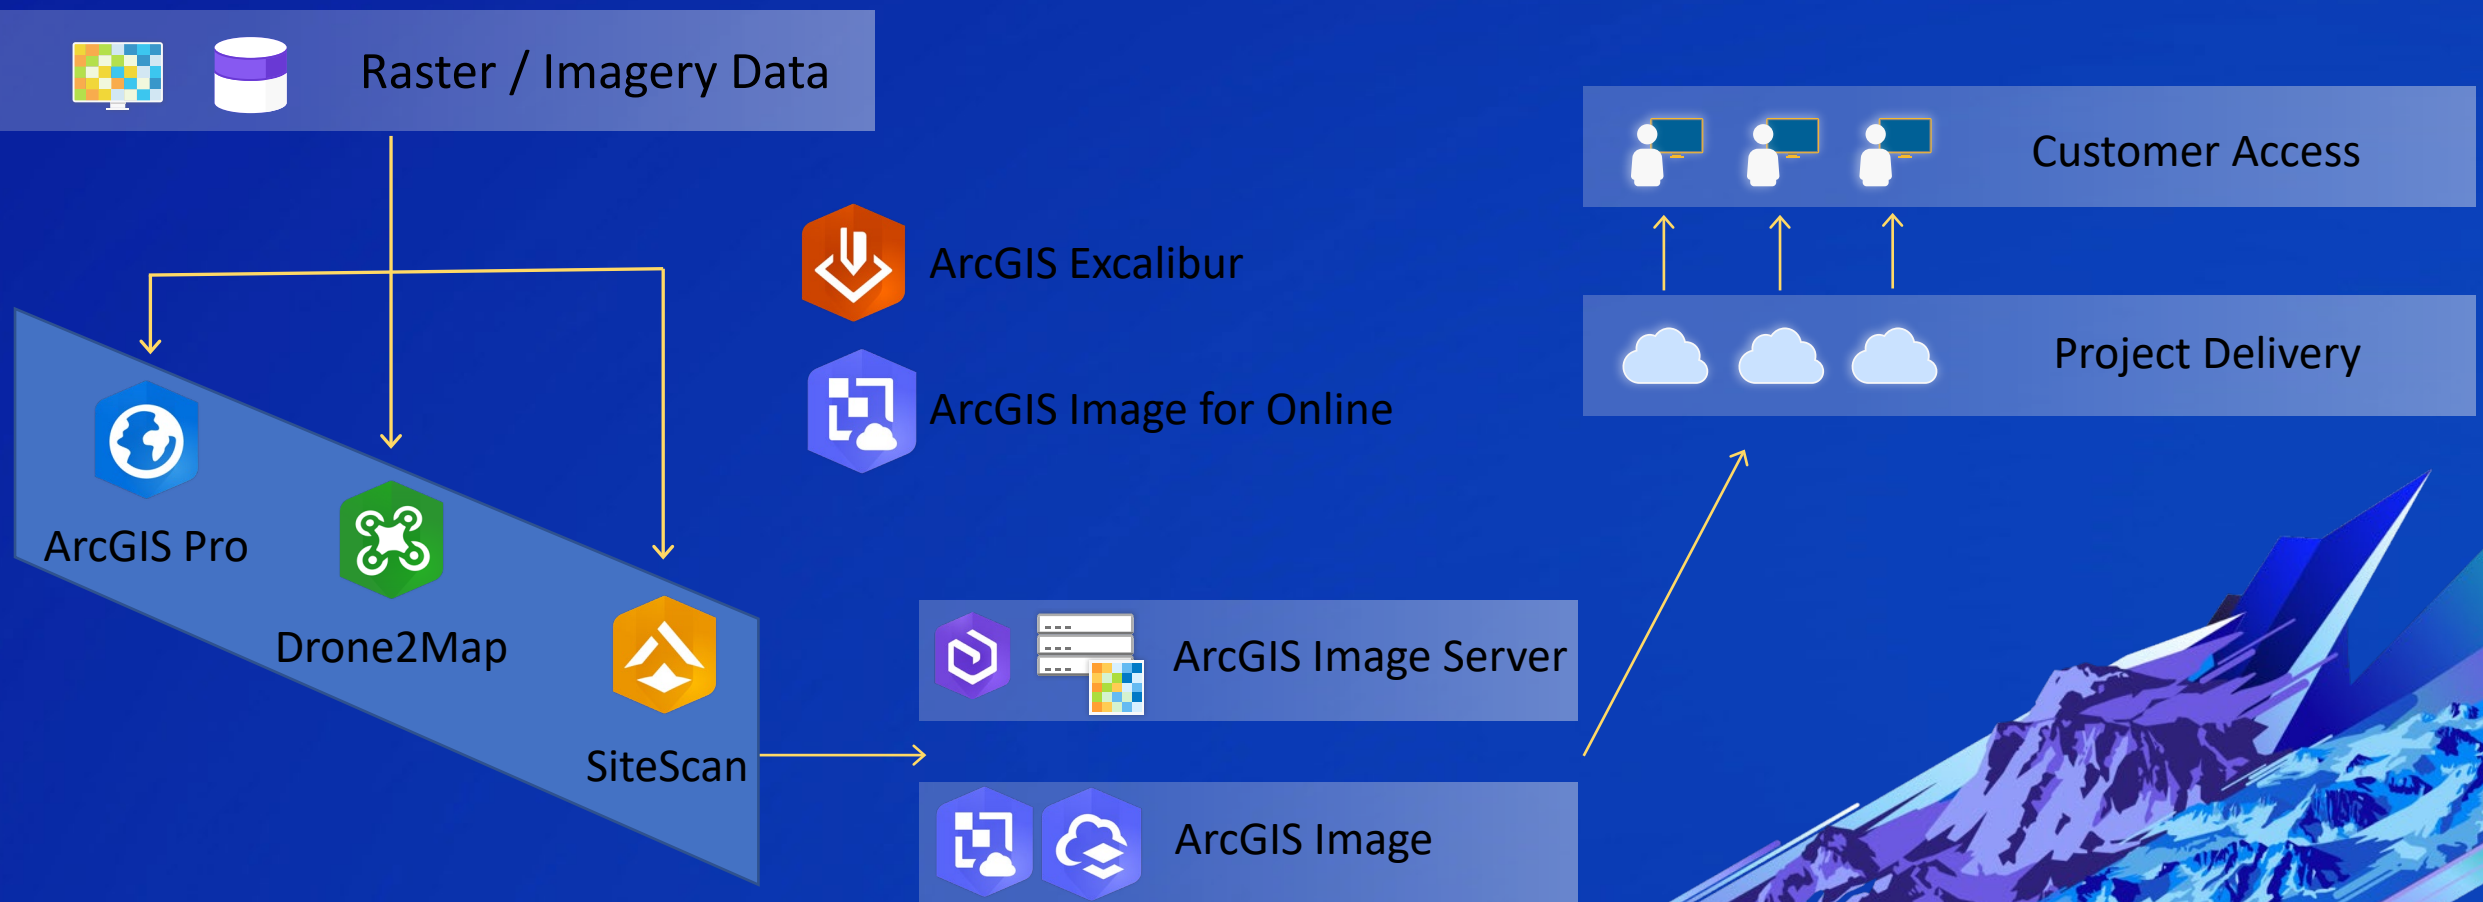

ArcGIS Imagery Patterns

Transforming Imagery into Information

Imagery Products

ArcGIS Pro

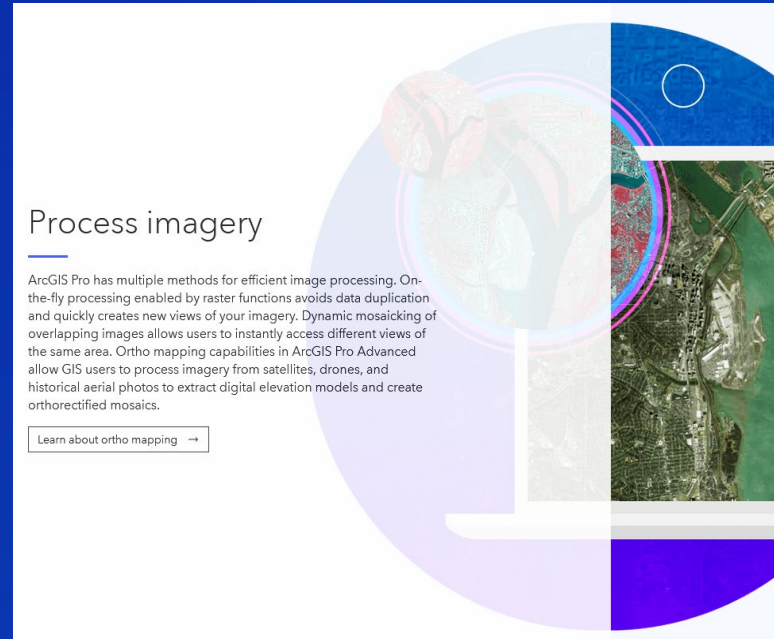

The world's leading GIS software

Manage imagery

Manage imagery from a wide variety of sources—satellites, drones, unmanned aerial systems, full-motion video, elevation, lidar, and more. ArcGIS Pro provides extensive enterprise image management capabilities and is used by organizations in a wide range of industries to manage their imagery holdings. This makes assets accessible and turns them into useful information products for both data visualization and analysis.

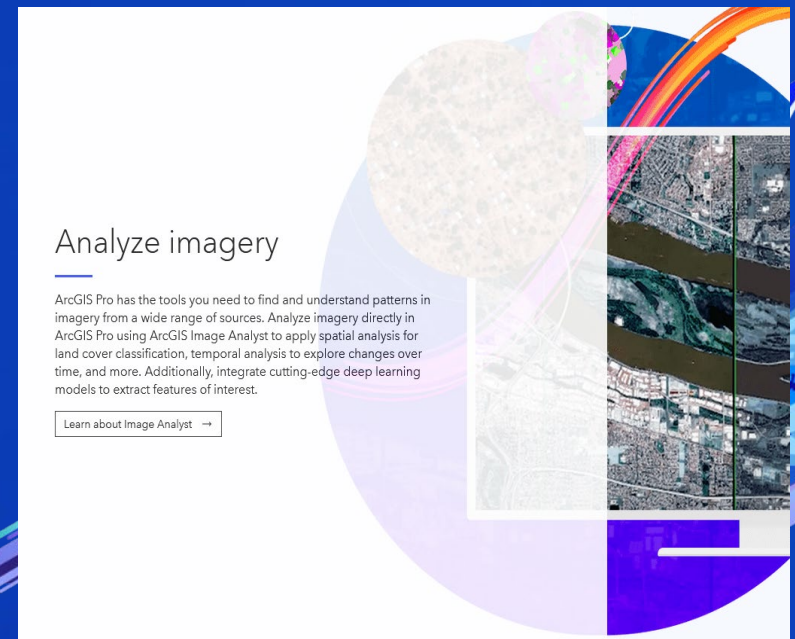

[Learn about imagery management →](#)

Process imagery

ArcGIS Pro has multiple methods for efficient image processing. On-the-fly processing enabled by raster functions avoids data duplication and quickly creates new views of your imagery. Dynamic mosaicking of overlapping images allows users to instantly access different views of the same area. Ortho mapping capabilities in ArcGIS Pro Advanced allow GIS users to process imagery from satellites, drones, and historical aerial photos to extract digital elevation models and create orthorectified mosaics.

[Learn about ortho mapping →](#)

Analyze imagery

ArcGIS Pro has the tools you need to find and understand patterns in imagery from a wide range of sources. Analyze imagery directly in ArcGIS Pro using ArcGIS Image Analyst to apply spatial analysis for land cover classification, temporal analysis to explore changes over time, and more. Additionally, integrate cutting-edge deep learning models to extract features of interest.

ArcGIS Imagery Management

*Making Imagery Accessible –
Image Management and Dissemination*

ArcGIS Pro

- Authoring Mosaic Datasets
- Raster Types/Products

ArcGIS Image Server

- Scalability
- Dynamic Image Services

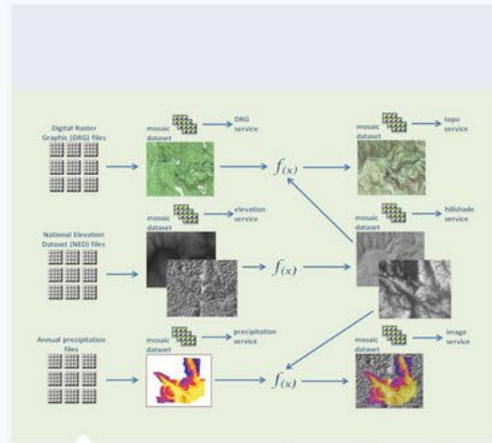

Too Many Images...

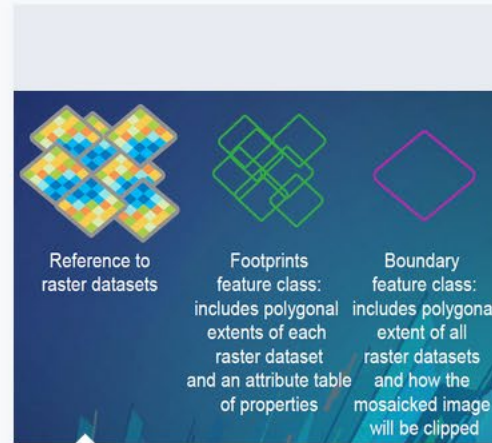

Why the Mosaic Dataset is Important

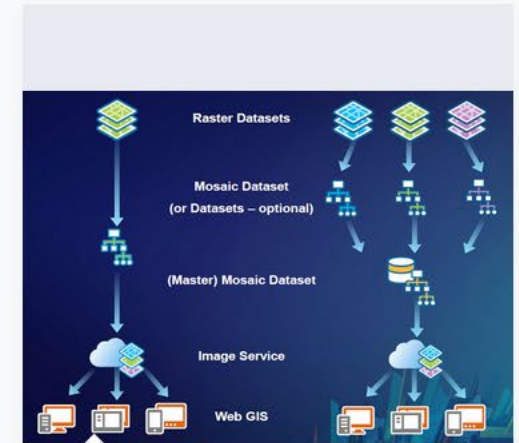

**MANAGE TERRABYTES OF NATIVE
IMAGERY.**

**COMPLETELY SCALABLE REGARDLESS
OF IMAGE TYPE.**

**TABLE STRUCTURE ALLOWS FIELD
EDITS AND UPDATES.**

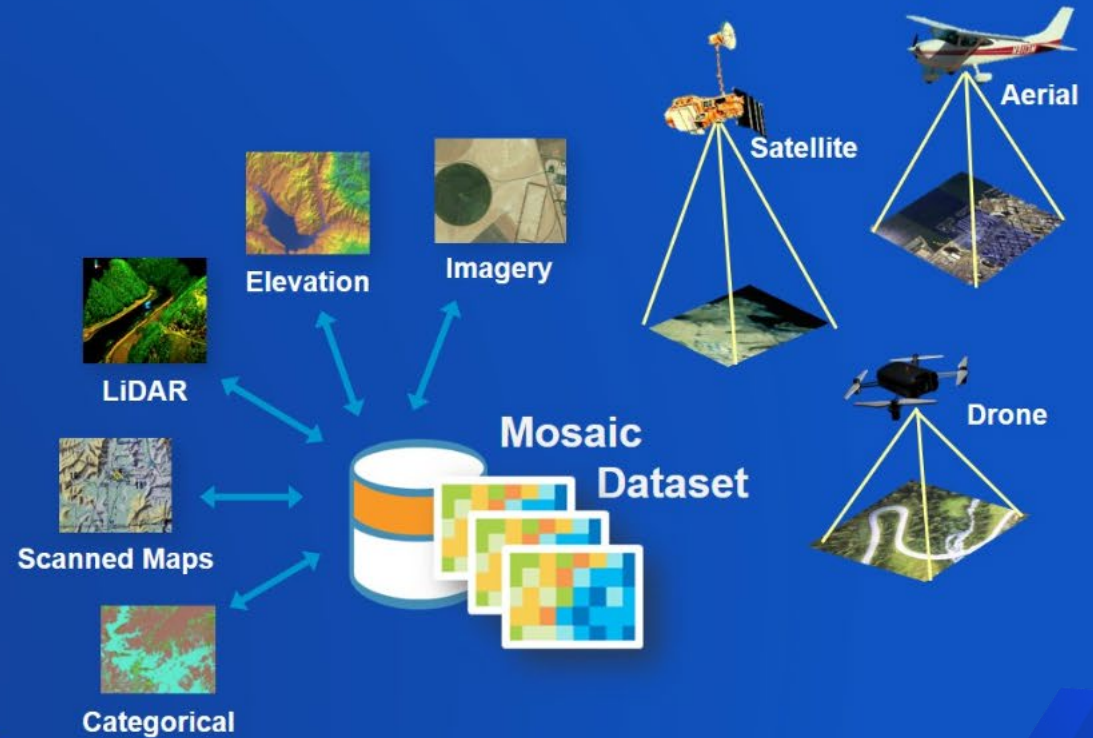

**IDEALLY SERVED PUBLICLY AS IMAGE
SERVICES.**

Image Management Using Mosaic Datasets

ArcGIS Imagery Information Model

- Supports multiple raster sources
- Supports many raster formats
- Maintains image quality
- Handles overlap and disparate datasets
- Supports over 50 sensor types
- Supports Image Services

Raster Functions

Perform analysis on the fly in seconds...

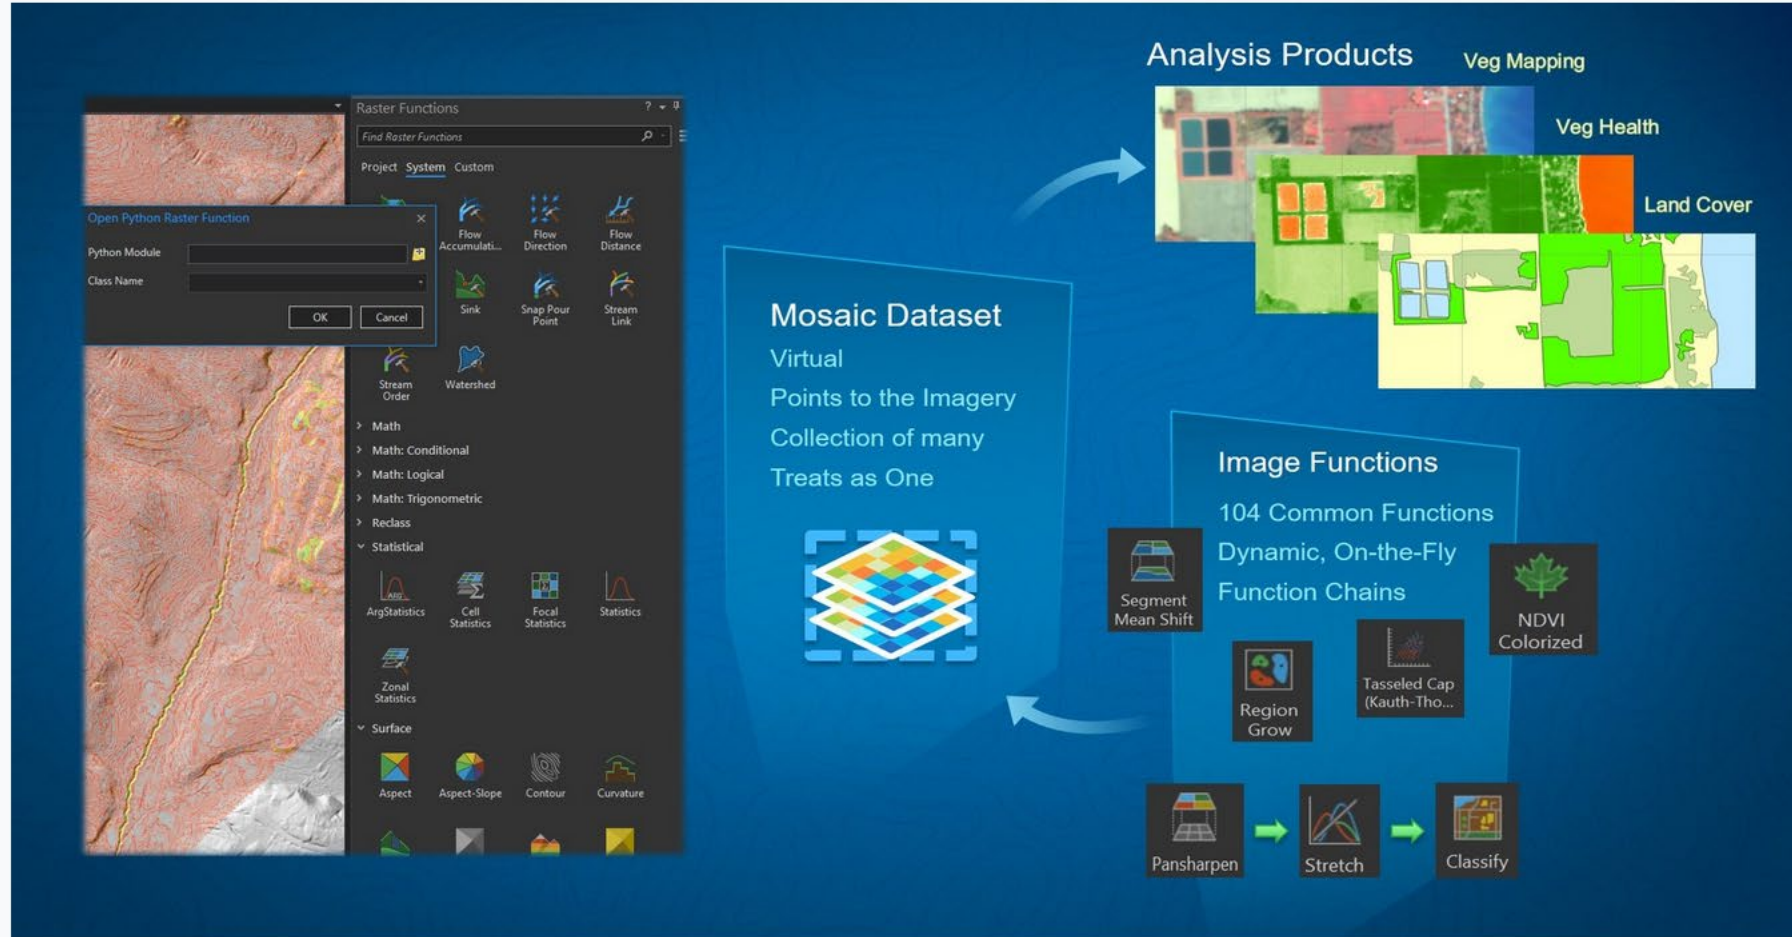

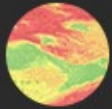

Image Analysis

 Detect change between images	 Process and analyze imagery in real time
 Scale and automate workflows with AI	 Understand trends using multidimensional data
 Quickly manipulate and edit pixels	 Use distortion-free image interpretation
 Visualize and capture features in stereo	 Manage and use motion imagery

 <p>Analyze terrains</p> <p>Derive useful insights from your data. Create a hillshade to use as a backdrop of the terrain to support other data layers. Calculate slope, aspect, and contours, or create a map displaying visibility</p>	 <p>Select best locations</p> <p>Find the ideal location with features that match your requirements. Consider criteria such as suitable demographics, environment and terrain to find the best site</p>	 <p>Find best routes</p> <p>Find the straight-line distance between two locations or create cost-weighted distance surfaces to understand the cost of getting from one location to another based on the criteria you specify</p>	 <p>Perform hydrologic analysis</p> <p>Derive insights from hydrologic and landscape data. Model where water will flow, create watersheds and stream networks and discover other hydrologic characteristics</p>
 <p>Gain statistical insights</p> <p>Analyze data distribution for a period. Calculate the mean crop yield over ten years, study variety of species contained within each neighborhood, or find the mean elevation per forest zone</p>	 <p>Manage risk</p> <p>Model risk factors such as ground slope, aspect, stability, forest fuel load and coastline inundation to understand the risk over your study area so you can come up with the appropriate mitigation plan</p>	 <p>Estimate cost</p> <p>Depending on your industry, factors such as terrain, waiting time, or any other physical obstacles can add to your cost. Analyze and predict costs taking into account multiple factors</p>	 <p>Detect patterns</p> <p>Analyze data from the past to uncover patterns. Combine location of crime with societal factors to visualize patterns that help law enforcement and city planners to take appropriate measures</p>

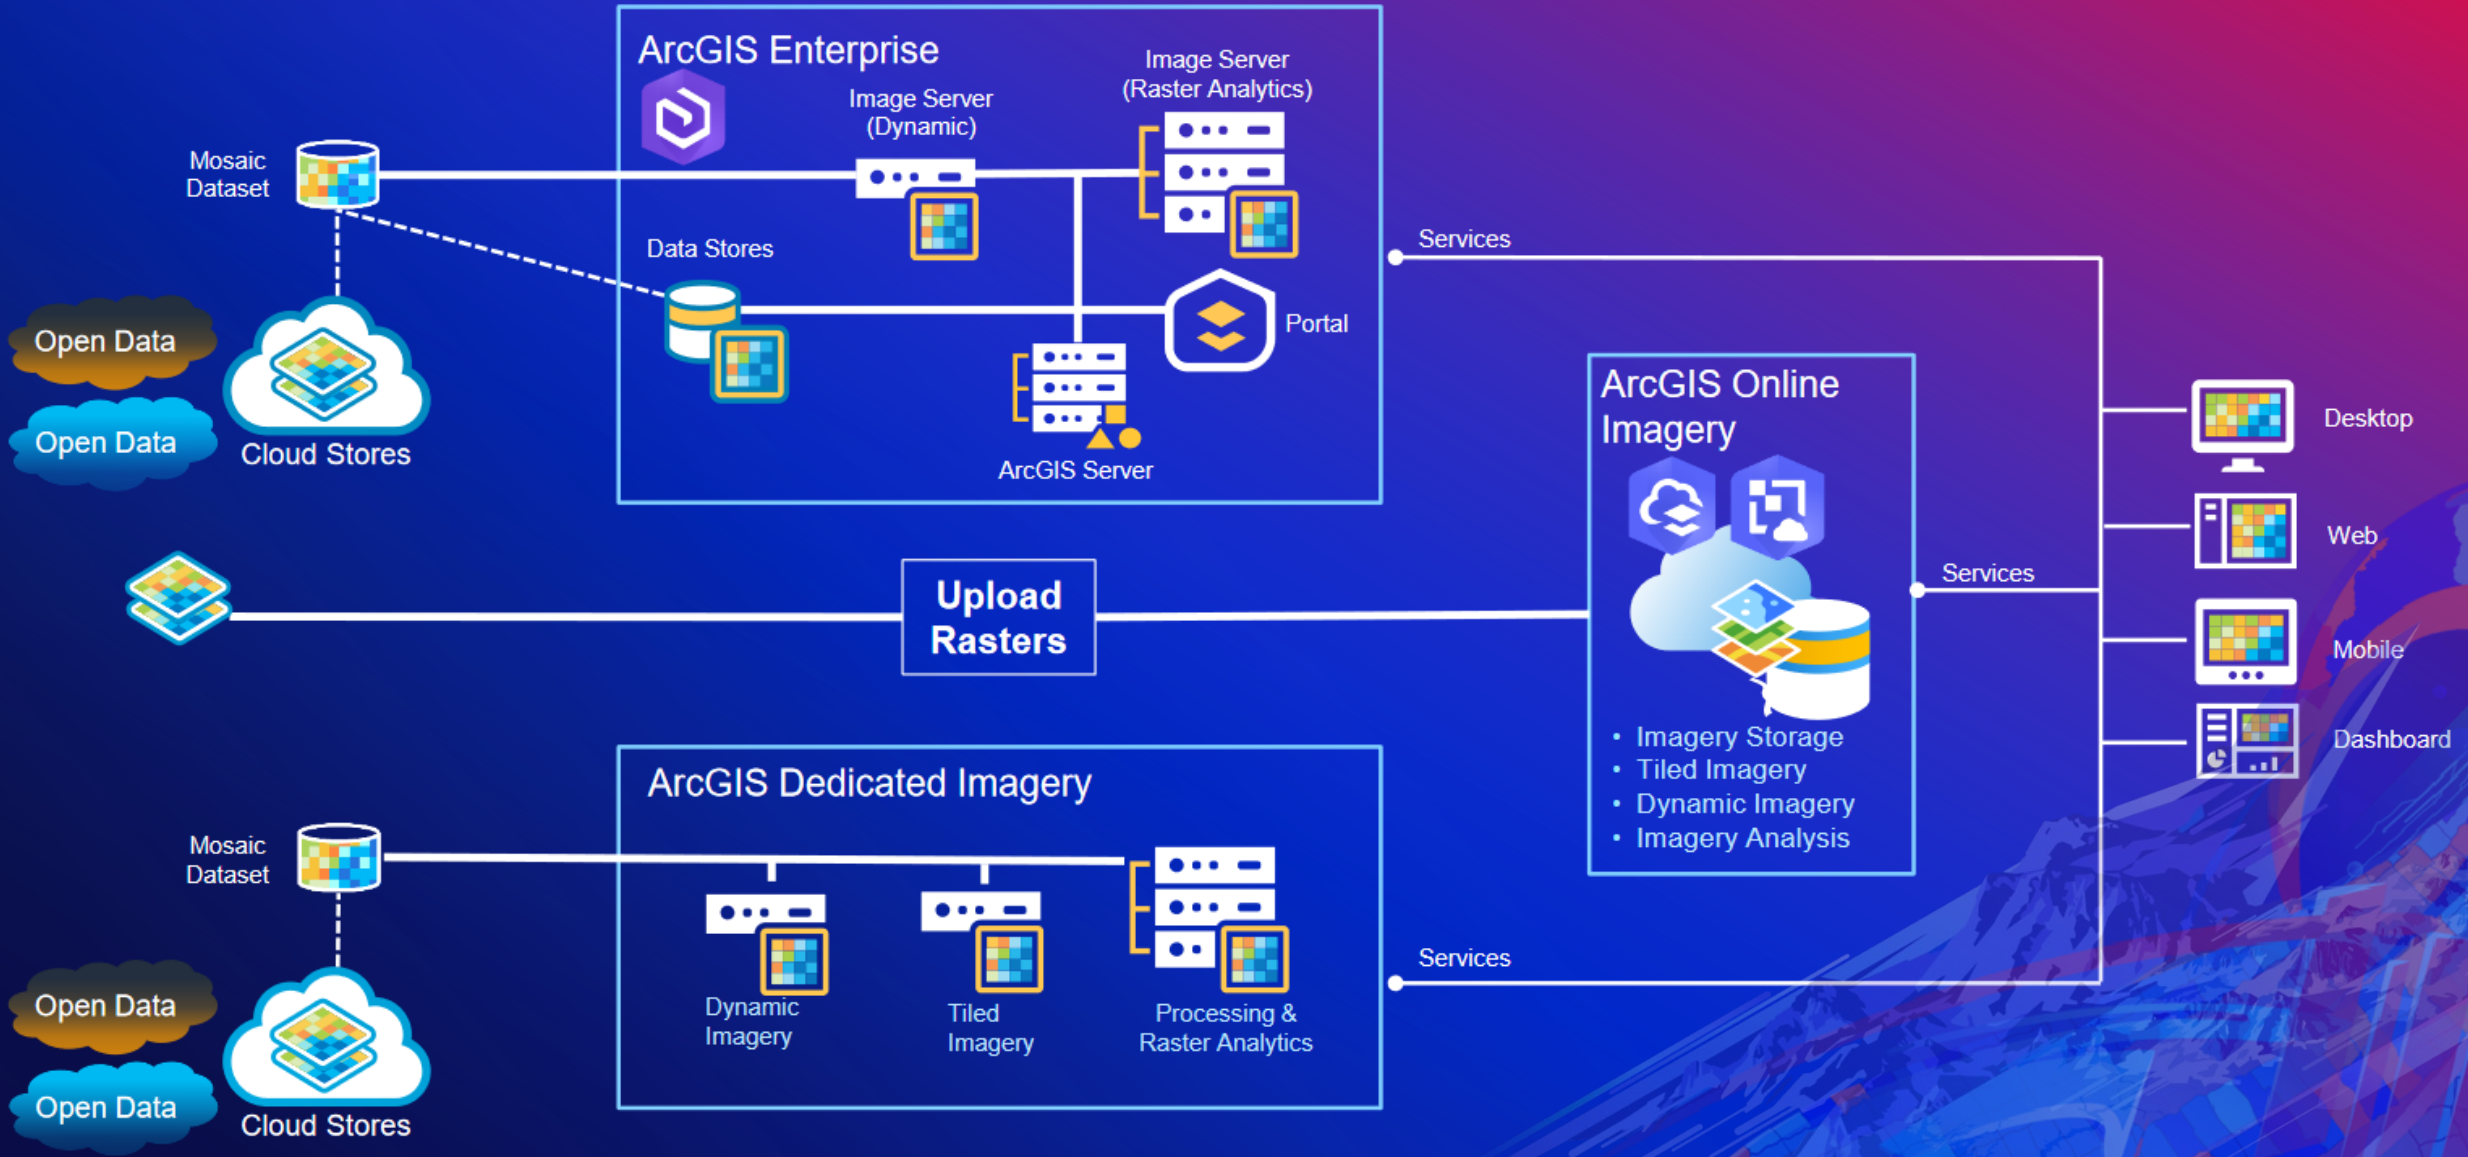

Storing and Serving Imagery

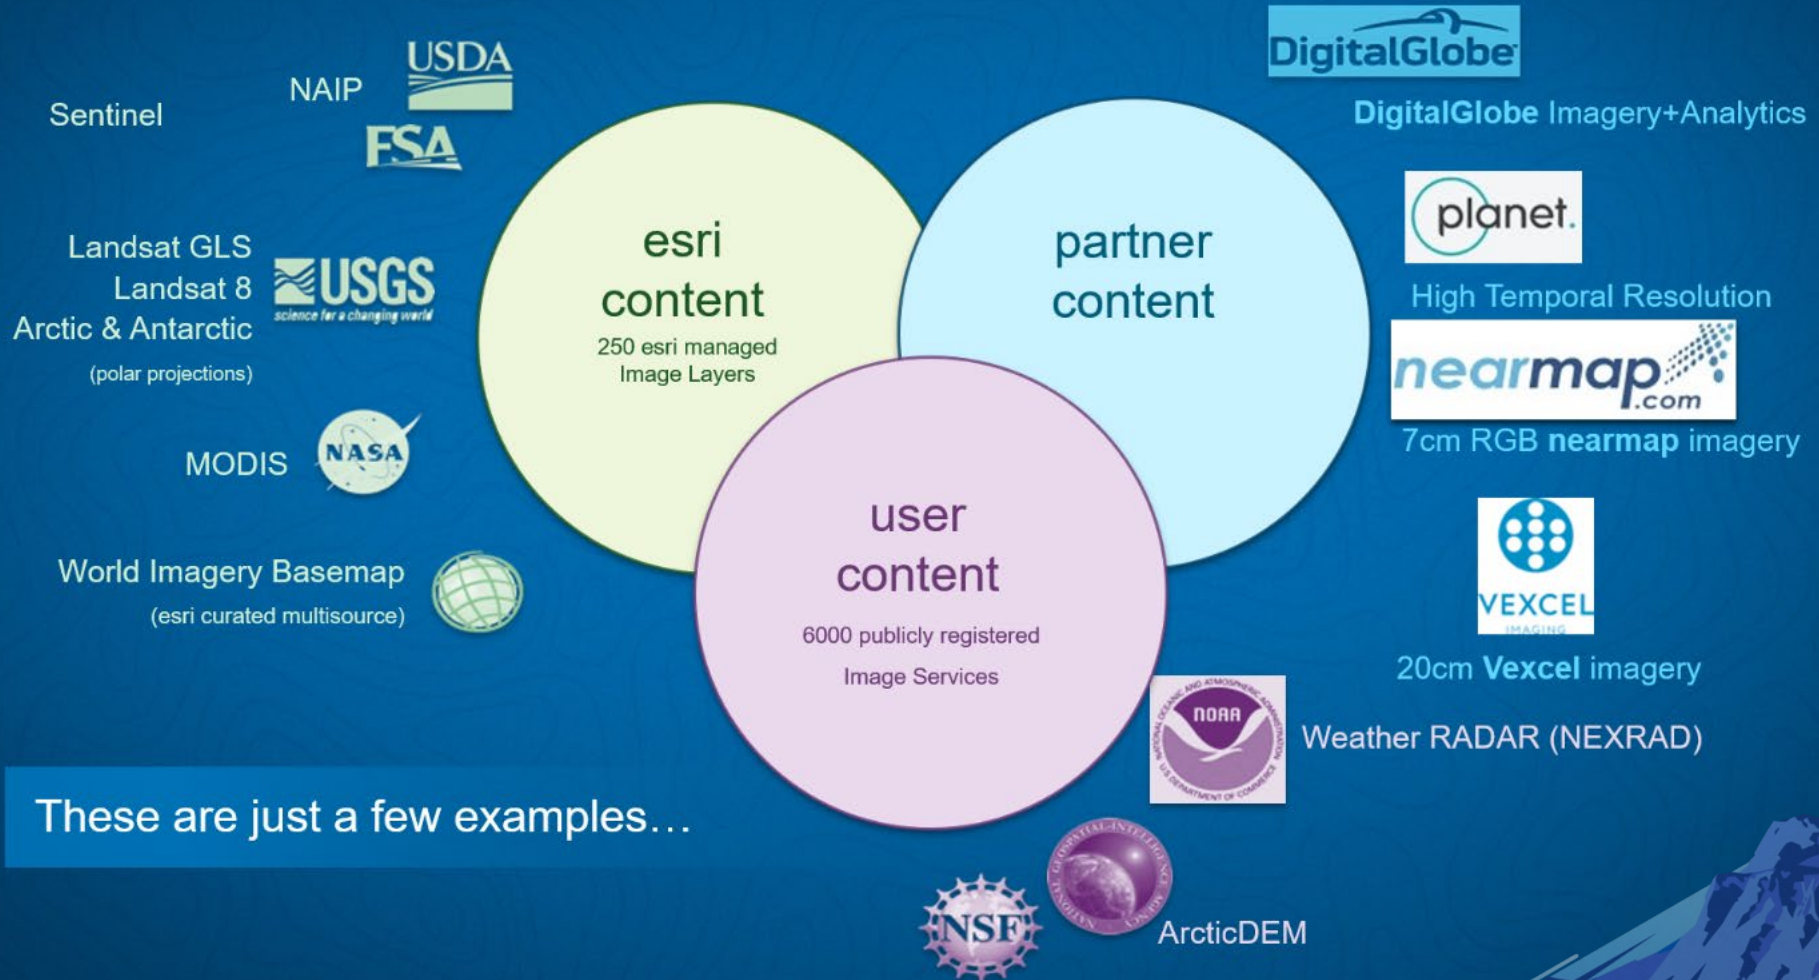

Deployment scenarios for managing Raster data.

- 1. Mosaic Dataset + Local File Storage**
Analysis for Internal Resources
- 2. Tile Cache in ArcGIS Pro + Publish to ArcGIS Online**
Basemap Creation in Pro
- 3. ArcGIS Enterprise + Image Server**
Hosted Imagery through Portal for ArcGIS
- 4. Standalone ArcGIS Image Server**
Image Hosting

Making Imagery Accessible

Examples of Content Under Image Management

INTRODUCTION TO

IMAGERY & REMOTE SENSING

A Learn ArcGIS Project

Get started with imagery: *Explore 40 years of Landsat imagery from around the world.*

- **Type:** Exercise based on real-world scenarios
- **Level:** Beginner
- **Software:** Esri Landsat Viewer
- **Data:** Landsat imagery
- **High-Level Tasks:** Explore Landsat imagery through the Esri

Landsat app; Learn to use the app; Experiment with imagery across time.

🕒 35 mins

Learn the fundamentals of image interpretation: *Explore and make sense of satellite and aerial imagery.*

- **Type:** Guided lesson based on real-world examples
- **Level:** Beginner
- **Software:** ArcGIS StoryMaps
- **Data:** Various satellite and aerial imagery
- **High-Level Tasks:** Learn about what image interpretation is, the importance of ground sample distance, and 7 essential cues of visual interpretation (shape, size, pattern, texture, signature, shadow, and context). Use these elements to interpret natural color, panchromatic, and color infrared imagery.

🕒 30 mins

Activities: Interactive web apps

Explore filters:

Apply different image filters to Landsat imagery.

Rendering New Orleans:

Explore different Landsat band combinations and indexes.

Imagery Demos
