# Esri Support for Open Geospatial Standards

## Executive Summary

At Esri, we believe in the power of The Science of Where™. Applied geography helps people better understand our world. Our work is the science of geographic information system (GIS) and location technology. We built and are constantly improving the geographic information system called the ArcGIS® platform.

People all over the world and across every field use ArcGIS to integrate and unify data to make better decisions and empower people to see and share information holistically. ArcGIS users have created countless essential GIS applications across hundreds of thousands of organizations. For 50 years, Esri has focused on interoperability as a basic design principle of our products.

Esri builds GIS and location-enabled products. To see a full listing of all the Esri products please visit [esri.com/en-us/arcgis/products/index](http://esri.com/en-us/arcgis/products/index).

## How Esri Keeps ArcGIS Open and Interoperable

The ArcGIS platform is engineered to be open, secure, and interoperable. To create an open and interoperable system, Esri has adopted a multifaceted approach, which includes the following:

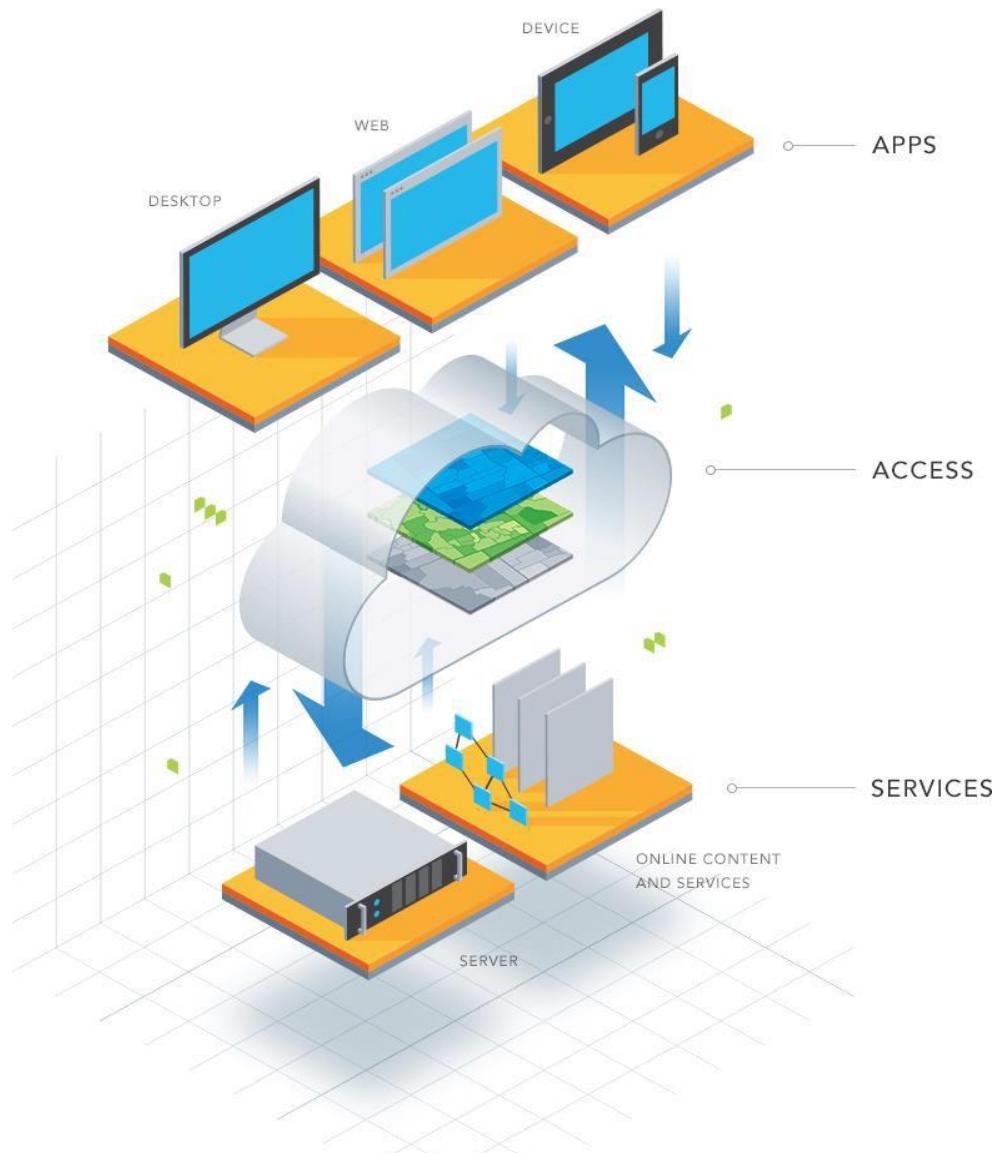

- Leveraging Standards—IT and GIS standards
- Open Architecture—Open APIs and published specifications
- Engaging Communities—Sharing applications, open-source software, and best practices

*"ArcGIS is an open platform. At Esri, we take that seriously because it means your data and systems are interoperable with other technologies. ArcGIS serves as an integral part of every organization. At its center is Web GIS, a way to open GIS access and benefits to everyone, while creating connections within and across organizations."—Jack Dangermond, Founder and CEO, Esri*

ArcGIS supports the following:

- Direct read/write of a wide variety of data formats
- Adoption and use of GIS and cloud standards and patterns
- Extract, transform, and load (ETL) technology
- Hardware platform choices
- Database choices

- Operating environment choices
- Cloud choices
- Developer tool choices
- Support for multiple coordinate, address, and temporal reference systems
- Support for thousands of datums and projection

ArcGIS Platform Is Open, Secure, and Interoperable

## Support for OGC

Esri is a Principle Member of the Open Geospatial Consortium, Inc. (OGC), and is active in its various programs. These include the OGC Standards Program, the Innovation Program, and OGC Outreach activities. Esri has served on various OGC committees such as the Planning Committee, OGC Architecture Board, Joint Advisory Group between OGC and ISO TC211, and OGC Technical Committee. Esri's director of Global Business Development is also on the OGC Board of Directors. Esri continues to be an active participant in various technical committee activities and has also hosted OGC meetings on our campus.

Esri's primary support for OGC is the implementation of OGC standards in our products. The ArcGIS platform encompasses a number of products that work together and as stand-alone offerings. As of March 2020, Esri has—over multiple releases of the ArcGIS platform and within various products—supported various versions of OGC standards in 148 different products. Additionally, ArcGIS products have 376 OGC Compliancy Certificates earned through the years.

*Please note that not all OGC standards have compliancy tests and, therefore, no compliancy certification process.*

The following are OGC standards supported in the ArcGIS platform listed in two categories:

- List of Esri OGC-compliant products. OGC compliancy means Esri has had our software tested by OGC to show compliancy to a given standard. (As mentioned above, not all OGC standards have compliancy tests, and Esri implements many OGC standards for which there are no tests yet available.)
- List of Esri products implementing OGC standards (these products are in addition to those that are in the OGC compliancy listing).

Compliant and implementing products are listed here by the names they were called at the time of testing and release. Some of Esri's product names may have changed to reflect the unified nature of the ArcGIS family of products.

**Esri OGC-  
Compliant  
Products**
