Table of Contents

Esri resources for your organization

Course introduction

Course introduction
Course goals
Installing the course data
Icons used in this workbook

1 Initiating GIS projects

Lesson introduction
GIS project considerations
Determining your project needs
Considerations for project data
Map projections
Data needs for your GIS project
Exercise 1: Recognize data considerations
- Create a project in ArcGIS Pro
- Define the area of interest
- Compare vector data layers
- Store data in a feature dataset

Lesson review
Answers to Lesson 1 questions

2 Acquiring and preparing data

Lesson introduction
Reviewing metadata
Sources of authoritative data
Acquire data for a GIS project
Data modification
Working with alternative data formats
Exercise 2: Prepare your project data
- Review the authoritative project data
- Save a subset of a dataset
- Append data to feature class
- Clip layers to an area of interest
- Review the metadata for the prepared data

Lesson review

Answers to Lesson 2 questions

3 Data quality

Lesson introduction
Describing data quality
Sources of error in a dataset
Sampling for data quality evaluations
Data quality categories
Measuring data quality
Spatial data quality statistics
Exercise 3: Calculate data quality statistics
    Compare the datasets in a map
    Calculate root mean square error
Calculating positional bias
Lesson review
Answers to Lesson 3 questions

4 Evaluating logical consistency and completeness

Lesson introduction
Logical consistency
Exercise 4A: Evaluate logical consistency
    Create a topology
    Validate a topology
    Inspect and view errors
    Fix line errors
    Mark errors as exceptions
    Fix polygon errors
    Populate the metadata
Data completeness
Addressing incomplete data
Assessing data completeness
Exercise 4B: Perform an evaluation of data completeness
    Visually compare two datasets
    Evaluate the percent completeness
    Review the attributes for completeness
    Populate the metadata
Lesson review
Answers to Lesson 4 questions

5 Evaluating spatial accuracy

Lesson introduction

Spatial accuracy
Horizontal accuracy
Exercise 5A: Evaluate horizontal accuracy
    Set up the project
    Calculate positional error in an attribute table
    Review statistics for positional error
    Use a custom tool to calculate positional accuracy
    Populate metadata
Vertical accuracy
Exercise 5B: Evaluate vertical accuracy
    Create a new scene
    View elevation points
    Calculate vertical accuracy metrics
    Populate metadata
Improving spatial accuracy
Spatial accuracy issues
Lesson review
Answers to Lesson 5 questions

6 Evaluating temporal quality

Lesson introduction
Temporal quality
Associate elements with scenarios
Currency versus accuracy
Exercise 6: Evaluate temporal quality
    Examine temporal consistency
    Visualize events over time
    Inspect the attributes
    Populate metadata
Lesson review
Answers to Lesson 6 questions

7 Evaluating thematic accuracy

Lesson introduction
Thematic accuracy
Raster data and classifications
Exercise 7A: Create a sample for evaluating thematic accuracy
    Review the classified values
    Reclassify raster values
    Convert the raster to points
    Create a random sample
Thematic accuracy evaluation results

Examine evaluation results tables
Exercise 7B: Evaluate thematic accuracy
Calculate metrics
Inspect results
Populate metadata
Examine alternate thematic data
Lesson review
Answers to Lesson 7 questions

8 Sharing prepared data

Lesson introduction
Sharing data for others to use
Making data accessible to others
Producing a result for a GIS project
Checkpoint
Exercise 8: Share data with a portal
Create a group for the deliverable
Filter the result data
Prepare a map for sharing
Share a web map
Update the details page
View the metadata for individual layers
Review the web map
Workflow review
Answers to Lesson 8 questions

Appendices

Appendix A: Esri data license agreement
Appendix B: Data quality statistics
Appendix C: Answers to lesson review questions
Appendix D: Additional resources
